Assignment: Install Ocaml, on your personal machine. If you intend to use the lab machines in EN4059 or EN4072, make sure it works for you there. As mentioned in class, I use Emacs with Tuareg mode - you might try looking at Notepad++ which has a mode for Caml.

http://notepad-plus-plus.org/
Microsoft’s Visual Studio has support for the F# programming language which should be very close to Ocaml – though I’m not sure if it would be useful or not.

On the course webpage I have links to the Hickey Notes and to the O’Reilly book Developing Applications with Objective Caml by Emmanuel Chailloux, Pascal Manoury and Bruno Pagano. Chapter 1 of the online O’Reilly has information on installation. Read chapter 2 of the O’Reilly text up to the section entitled Typing, domain of definition, and exceptions.
