

### Lab 1: Setup and basic app, plus GitHub.

1. Use this link to get the GitHub repo: <https://classroom.github.com/a/kOyAN4ow>
2. Update the README with your name and lab 1
3. I'd suggest creating the android in the repo directory, (otherwise you will have to copy into the repo directory anyway)
4. Create a simple helloworld app.
  - a. You will need an input box, textbox, and button.
    - i. You can change the textbox for a snackbox or toast. It's up to you.
  - b. The user can type their name (or whatever) in the input box, press the button, it will display hello name (from input box) in the text box.
5. Lastly, change the default app icon, see the image/vector assets lecture.
6. Take at least one (may need 2) screen captures, showing that the app works. Also copy them into the repo.

### Turn in:

1. Make sure the readme has been updated with your name and lab 1.
2. Update the AI use section
3. Include the screenshots show the app works.
4. Make sur the app and everything has been pushed to GitHub.
