

Lab 5: Support Preferences

1. Use this link to get the GitHub repo: <https://classroom.github.com/a/AURP-r7t>
2. Update the README with your name and lab 5
3. I'd suggest creating the android project in the repo directory, (otherwise you will have to copy into the repo directory anyway)
4. Choose at least 3 different preferences, but must an edittext (ie checkbox, list, toggle, etc)
 - a. Note you CAN NOT use the generic ones from fragment->settings fragment. But it's a good way to get the code and libs set up. You will just change the root_preferences to something new.
 - b. All three should be live summaries (old or new method). If new At least 1 Custom SummaryProvider.
5. Take at least two screen captures (1 for each old info, second with new summaries), showing that the app works. Also copy them into the repo.

Turn in:

1. Make sure the readme has been updated with your name and lab 5.
2. Update the AI use section
3. Include the screenshots show the app works.
4. Make sur the app and everything has been pushed to GitHub.
