

Lab 8: Notifications

1. Use this link to get the GitHub repo: <https://classroom.github.com/a/WQQMk6GT>
2. Update the README with your name and lab 8
3. I'd suggest creating the android project in the repo directory, (otherwise you will have to copy into the repo directory anyway)
4. Setup a basic app, make sure you create at least one notification channel in onCreate
5. Have button (or menu, etc) for the user to click to create a notification.
 - a. The notification title should be lab 8
 - b. The notification should have an intent that would open the app when the user clicks the notification.
6. At least one screen captures showing the notification in with the lab 8 title. Note, this is not a screenshot of the app, instead it's notification bar. Also copy it into the repo.

Turn in:

1. Make sure the readme has been updated with your name and lab 6.
2. Update the AI use section
3. Include the screenshots show the app works.
4. Make sur the app and everything has been pushed to GitHub.
